

SENDING STEMS

Stems are the foundation of any mixing or finishing job. Follow these steps to make sure each file arrives correctly formatted, properly labelled, and ready to load — no extra back-and-forth needed.

❖ ❌ REMOVE ALL MIXING EFFECTS, BUT KEEP SOUND DESIGN PROCESSING

Do not include EQ, reverb, compression, stereo wideners, mastering chains, etc. unless they are absolutely essential to the character of the sound.

❖ ✅ CHECK THAT NO TRACK IS CLIPPING

❖ 📁 EXPORT EACH INDIVIDUAL ELEMENT OF YOUR TRACK WAV format, 24-bit resolution, and 44.1kHz or higher. Make sure normalization is turned off in your export settings

Each file should contain only one element (or logical group) and must start from the very beginning of the track (0:00), even if the sound comes in later.

❖ 📁 ORGANIZE AND COMPRESS YOUR FILES

Place all the exported stems and the preview file in a clearly named folder (e.g., ProjectName_Stems). Then compress the folder into a single .zip file.

❖ 📁 UPLOAD THE .ZIP FILE

Upload your zipped project to a file sharing service like Google Drive, Dropbox or WeTransfer. Double-check that the link works without requiring permission or login.

YOUR STEMS ARE READY TO GO.

Reply to your order confirmation email with the link — I'll take it from there. Questions? Get in touch at the contacts below.
